Content Management

A simple and intuitive interface allows content management with concepts that are familiar to the users, similar to common file and folder interfaces. Includes an advanced text editor that enables the creation of structured documents without needing to know HTML.

Internationalization and multi-language content

In addition to the normal application interface internationalization (I18N), content can be created in several languages, using a translation-management interface

Security

Different user profiles associated with a granular, easy to configure, security mechanism that allows the delegation of content-management roles.

Extensible solutions

Highly modular system, easily allows the development of additional modules.

Software Development and Integration

Search Engine

Includes a search engine that indexes all content, including common formats (DOC, PDF, XLS, etc.), using thesauri, wild-cards, etc.

Workflow

Easily configurable and extensible workflow mechanism that allows the definition of state and flow rules, enabling the implementation of content revision processes in a collaborative context.

Web Standards

Respecting web standards is an ever more a requirement for web solutions. Development of 100% valid web pages allows a greater visibility in search engines and better browser behaviour.

Desktop Integration

The users can import and export their documents from/to office productivity suites like MS Office, OpenOffice.org or LibreOffice. The use of protocols such as WebDav allows the integration with the desktop, enabling copy and paste operations.

Accessibility

Beyond being mandatory in public sector sites, to ensure the access of all citizens, respect for accessibility standards is also essential for any commercial application.

Large Organizations using Plone

NASA | Oxfam | Amnesty International | Nokia | eBay | Novell
Government of Brazil | Government of New Zealand

Interoperability

Integrates with other database and directory systems, namely LDAP, Active Directory, PostgreSQL, MySQL, Oracle, etc.
