MOVING BUSINESS FORWARD

Eurotux

DevOps

A set of services that provide support and consulting for the implementation of a culture supported by tools and processes which will maximize cooperation between teams, reducing risk and obtaining a faster time-to-market.

DevOps

- CLOUD MIGRATION
- CONTAINERIZATION
- AUTOMATION DEVELOPMENT
- CI/CD PIPELINE IMPLEMENTATION
- QUALITY CONTROL

SIMD

(Single Instruction Multiple Data) is a term used to refer to a subset of modern CPU instructions in the hardware industry.

This is very similar to how the DevOps methodology optimizes the throughput and workflow of both clients and collaborators.

Similarly to SIMD, the DevOps team at Eurotux, strives to provide streamlined solutions to as many problems as possible, in a constant effort to improve time to market and reduce manual, error-prone tasks for all teams involved.

This has a compound effect in the success of our clients, which, in turn translates into our own success.

**SO THAT OUR CLIENTS CAN
FOCUS ON WHAT REALLY
MATTERS
- THEIR BUSINESS.**
